

Onsite Exchange Programs

SilentFlo™ Pump/Motor Modules

Powerful benefits

- » Good-as-new pump/motor module performance
- » Longer overall life for HPU operation
- » Stronger investment protection
- » Significantly lower replacement cost
- » 12-month warranty
- » Stringent remanufacturing specifications
- » Field service engineers handle the entire process
- » Available for all sizes of SilentFlo HPUs

Enhance productivity and extend equipment life

Delivering extremely quiet and energy-efficient hydraulic power generation, MTS SilentFlo Hydraulic Power Units (HPUs) drive the productivity of any lab that conducts servohydraulic testing. These dependable, reliable HPUs are designed to provide high uptime and lasting performance with proper maintenance. Now, you can extend the life of this equipment even further with a convenient and streamlined exchange program for SilentFlo pump/motor modules.

The MTS Pump/Motor Module Onsite Exchange Program offers a quick, easy and cost-effective way to replace the most important part of your HPU when it shows signs of wear. MTS manages the entire

process. An MTS field service engineer visits your facility to install a fully warranted, remanufactured pump/motor module in place of the original, which is returned to MTS as a core.

This program helps lab and facility managers accomplish several critical objectives. It restores HPU performance quickly to improve uptime and significantly extends the life of the HPU. This program is also more affordable than purchasing a new module. Finally, as part of a service contract, it enables proactive HPU maintenance. In other words, you can build your budget with this planned expense in mind, as well as perform the replacement during a convenient window in the test schedule.

be certain.

Convenient, easy process

Exchanging a SilentFlo pump/motor module through this program is simple and effortless. In fact, there is nothing for you to do except schedule the appointment. The MTS team handles field delivery, installation and return of the original module. There is no need for your staff to package the core or process it for return.

Optimized service schedules

Because the module exchange can be scheduled at your convenience, it allows test labs to minimize interruptions to the test program. The exchange can also be combined with other onsite services, such as MTS Routine Maintenance and Fluid Assessment Services—both of which help extend pump life and help prevent unexpected failures.

CASCADING REPLACEMENT

You have the option of replacing each of your pump/motor modules on a regular rotating schedule to prevent excessive wear of any of the pump/motor modules.

Stringent quality standards

Exchange pump/motor modules are remanufactured according to strict MTS standards, and these specifications incorporate the latest product revision levels. As a result, you can expect like-new module performance for much less than the cost of a new replacement. This saves labor costs and reduces downtime compared to installing a replacement pump or motor separately.

Complete service solutions

Every day, MTS designs and delivers industry-leading test systems for a wide range of applications. In addition, we also offer extensive service and support, working directly with customers to address complex testing and lab operation challenges.

Based on decades of experience providing service solutions around the world, MTS has created rigorous best practices for maintaining successful test environments. We have seen first-hand how test teams must rearrange priorities to accommodate decreasing budgets and accelerating product development cycles. We know labs are under intense pressure to save time and money.

This is why forward-thinking labs are changing their approach to maintenance. These highly efficient test operations are shifting away from a traditional reactive model toward a planned, proactive strategy. The advantages of this approach include higher productivity, lower costs and less disruption—all of which help protect the development cycle.

Exchange programs are one part of this strategy. MTS also offers a wide range of service solutions designed to help you maximize testing effectiveness. We look at your equipment, your lab and your test program to see where we can add value and help meet specific objectives. Contact us today to optimize your testing operations with MTS service solutions.
